

# WAFS software

<i>Vendor/Product</i>	<i>Supported operating systems</i>	<i>File-sharing protocols</i>	<i>Central management</i>	<i>Meshed architecture support</i>	<i>Agents pushed out</i>	<i>Compression</i>	<i>File differencing</i>	<i>Temporary file optimization</i>	<i>File versioning</i>	<i>File synchronization</i>	<i>File segmentation</i>
<b>Avall Inc.'s Avall 3.0</b>	Windows	NTFS, CIFS, NFS	✓	✓	✓	✓	✓	✓	✓	Real-time	✓
<b>Signiant Inc.'s Mobilize</b>	Linux, Windows, Unix, NAS, VMware	CIFS, NFS, TCP/IP, UDP/IP	✓		✓	✓	✓	✓	✓	Point-in-time	✓

**Notes:** File segmentation: Files are broken down and stored as segments so only changed segments are transmitted

File versioning: Product manages versions of files if network goes down

File optimization: Product recognizes application-specific temporary files, and reduces the amount/prevents this type of data from being transmitted

File differencing: Only changes to file at remote office are sent back to central office

Meshed architecture support: No central site required for WAFS product to operate
